

LENDERLINK®

## Connecting to Higher Productivity

The ultimate middleware connector for loan origination systems

### Do it once. Do it right. Never do it again!®

If you process loan applications, you need LENDERLINK® to automate the interface between your loan origination and core systems.

As a middleware solution, LENDERLINK pulls information from your loan origination system (LOS) and pushes it to your core system. LENDERLINK can perform this task automatically in the background, or you can use LenderLink to review and edit the information prior to sending it to core. For most origination systems, LENDERLINK can also pull up-to-date, real-time information (such as CIF) from the core and push it back to the LOS.

LENDERLINK is the most powerful and flexible middleware available in the industry – and compatible with virtually every LOS and core processing system combination. Start boarding loans simply and seamlessly with LENDERLINK.

### Customized for Your Operations

How much and what type of information do you want to collect when originating loans? Do you want to collect the minimum or as much as you can—including financial and legal—before boarding the loan?

LENDERLINK supports both approaches. Lowenstein and Associates will work with you to customize LENDERLINK's LOS fields and data mapping to match your operations. We even provide customized field-level help text so that staff instructions are documented.

*"I rate LENDERLINK and Lowenstein and Associates as A+ in the world of software products and support. To anyone considering this product, I would say that you can't go wrong with LENDERLINK. The support and the product are head and shoulders above the rest of the software out there."*

*Tim Eberly  
Activity Manager/Special Projects  
Peoples Federal Savings Bank of DeKalb County*

LENDERLINK®

## Increase Efficiency, Reduce Errors

Stop duplicate data entry!

You've already entered loan application information in your LOS. Once the loan is approved, don't re-enter the same information in the core system. LENDERLINK's smart-communication technology eliminates double/triple data entry. It automatically assigns key loan characteristics based on loan type and passes that information to the core. It posts funding transactions to the core and pulls CIF information right back into your LOS.

By using LENDERLINK to move loan information between your LOS and your core, you reduce data entry errors and free up time for your staff to focus on other tasks. Not only does LENDERLINK make your people more productive, it facilitates segregation of duties when boarding loans. LENDERLINK even helps with general ledger and funding transactions.

*"LENDERLINK reduced our loan boarding time from 20-30 minutes to 5-10 minutes. The process works easily and efficiently. Their support personnel are quick to respond to any changes we need and they are always a pleasure to work with."*

*Brenda Butrum  
Loan Oversight  
First Federal Bank*

### So Much More than Origination

LENDERLINK is an online, real-time bulk monetary transaction and bulk loan posting solution. If you process hundreds or thousands of monetary transactions daily—whether from lending, payroll, remote operations or other sources—or you buy pools of loans, you'll be happy to know that LENDERLINK generates automated batch uploads to replace manual transaction posting and manual boarding of purchased loans.

### It's a two-way process!

You can also use LENDERLINK to feed data from your core to other ancillary systems, such as Collections and General Ledger. Instead of a nightly batch feed of information that becomes outdated the minute a transaction is made, your staff can pull real-time data directly from the core whenever needed.
